We are working as hard as possible to get our website updated today, inclusive of links to the EFDC and HSPF along with the input data files. We will also provide all data files to the States at the workgroup meeting next week.

OK. That sounds like they don't have something to distribute yet, right?

They have earlier versions and they've seen all the input data files and the model outputs. We plan to package everything on flash drives.

Do the states have the models now? David thinks they do.

I don't know. FORTRAN is just part of the HSPF name.

The Illinois River watershed model was developed in HSPF. The Lake Tenkiller model was developed in EFDC. EPA is making the HSPF and EFDC model input files available. To generate the output, the input files must be run with the associated executables.

To confirm…are we making these publicly available? I thought we were sharing them with the states.

Thanks.

Taim.
